About the Hypertension Dashboard

Using information from the Uniform Data System (UDS), the Hypertension Dashboard provides a multilevel view of hypertension control (high blood pressure control) in HRSA-funded health centers. Users can compare annual health center- and state-level UDS hypertension data to national benchmarks.

On this dashboard, you can view:

- Number of health centers that met/exceeded Healthy People 2020 objective by state
- Percentage of patients with controlled blood pressure by health center
- States that met/exceeded Healthy People 2020 objective for hypertension

Dashboard Data Download Source File: [XLSX](#)

Note: The dashboard data is updated annually using UDS data and Healthy People 2020 benchmark data.
