About the 2022 Health Center Patient Survey Dashboard

The 2022 Health Center Patient Survey (HCPS) Dashboard is an interactive tool that allows users to tailor and download the results by select survey questions and populations for the 2022 and 2014 survey years. The 2022 and 2014 HCPS public use files (PUF) are the data sources for this dashboard.

For more information, visit the Health Center Patient Survey landing page. Learn how to use the 2022 HCPS Dashboard by accessing the dashboard instructions and video tutorials.

On this dashboard, you can view 2022 HCPS data in the following ways:

- Bar charts that display
 - distribution (percent and count values) of health center patient responses for HCPS survey questions with sufficient sample sizes to produce stable estimates
 - estimated distribution of responses to a HCPS survey question within the entire Health Center Program population
 - confidence intervals, or the range of expected values based on the survey sample, for the estimated responses
- Tables that display
 - percentage of health center patient responses to a HCPS survey question
 - number of health center patient responses to a HCPS survey question based on sample size
 - estimated number of health center patients expected to belong to a certain HCPS survey question based on Health Center Program population size
- Relationships, or cross tabulations, between two HCPS variables
- HCPS survey questions by filtered population

Download the HCPS Public Use File (PUF)

Read the [2022 HCPS PUF disclosure statement](#).

The 2022 HCPS PUF can be downloaded in multiple file formats (SPSS, Stata, R, CSV, SAS, SAS formats catalog 32-bit, SAS formats catalog 64-bit) on the HCPS landing page.

Data Considerations

Please note, it is not possible to compare 2014 to 2022 HCPS data as HRSA changed data collection procedures for the 2022 HCPS survey due to the COVID-19 pandemic. Additionally, some results are suppressed because conditions were not met for statistical reliability.

Data Sources

- The dashboard pulls in data from the 2022 and 2014 HCPS. Of the 465 variables available in the 2022 HCPS PUF, 453 are available in the dashboard. Some variables are not available to ensure patient confidentiality and privacy.
