### **Appendix F. Region and State FIPS Codes**

### **Appendix G. Metropolitan Areas and Components, 1992, with FIPS Codes**

## **A. Data Use Agreement**

Individual identifiers have been removed from the data file. Nevertheless, under section 308 (d) and 903 (c) of the Public Service Act (42 U.S.C. 242m and 42 U.S.C. 299 a-1), data collected by the Bureau of Health Professions (BHP), Health Resources and Services Administration (HRSA), may not be used for any purpose other than for the purpose for which it was supplied; any effort to determine the identity of any reported individual, is prohibited by Law.

Therefore, in accordance with the above Federal Statute, it is understood that:

No one is to use the data in this data set in any way except for statistical reporting and analysis; and

If the identity of any person or establishment should be discovered inadvertently, then (a) no use will be made of this knowledge, (b) The Bureau of Health Professions will be made aware of this incident, (c) the information that would identify that individual will be safeguarded or destroyed, as requested by the Bureau of Health Professions, and (d) no one else will be informed of the discovered identity.

No one will attempt to link this data set with individual identifiable records from any data sets other than the National Sample Survey of Registered Nurses (NSSRN).

By using this data you signify your agreement to comply with the above stated statutorily based requirements with the knowledge that deliberately making a false statement in any matter within the jurisdiction of any Department or agency of the Federal Government violates 18 U.S.C. 1001 and is punishable by a fine of up to \$10,000 or up to 5 years in prison.

HRSA/BHP requests that users cite HRSA/BHP and the National Sample Survey of Registered Nurses as a data source in any publications or research based upon these data.

## **B. Introduction**

This documentation describes one in a series of public use files from the National Sample Survey of Registered Nurses (NSSRN). Data from these periodic surveys provide the basis for evaluating the trends in, the availability of, and projection of future supply of nursing resources at the national and the State levels.

This is the fifth study and was conducted in March 1992. Previous studies were conducted in September 1977, November 1980 and 1984, and March 1988. Subsequent surveys of the National Sample Survey of Registered Nurses were conducted in March 1996 and March 2000.

### **1. Background**

The NSSRN assists the Health Resources and Services Administration (HRSA), Bureau of Health Professions (BHPr), in carrying out three congressional mandates. Under Title IX, Public Law 94-63, Nurse Training Act of 1975, Section 951 requires the gathering of data that will provide national and State level estimates on the: (a) number and distribution of nurses, by type of employment and location practice, (b) number of nurses practicing full-time and part-time within the United States and within each State and the District of Columbia, (c) average rates of compensation for nurses, by type of practice and location of practice, (d) the activity status of the total number of nurses with advanced training or graduate degrees in nursing by specialty including nurse practitioners, nurse clinicians, nurse researchers, nurse educators, and nurse supervisors and administrators, and (e) number of nurses entering the United States annually from other nations. Section 806 (f) of Public Law 105-392, the Health Professions Education Partnerships Act of 1998 requires discipline workforce information and analytical activities for advanced nursing education, workforce diversity, and basic nursing education and practice. Section 792 of the PHS Act (42 USC 295k) calls for a program to collect, compile, and analyze data on health professions including nurses.

In addition to providing an integrated, in-depth picture of the total RN population to meet legislative requirements, the sample surveys are used to assess the impact of current Federal programs for nursing, and to evaluate the need for, and the nature of, future Federal interventions. The NSSRN has been viewed throughout the Department, other Departments and Agencies within the Executive branch and congressional offices and agencies as the key source of background data on RNs.

The target population for this study is all RNs with active licenses in the 50 States and the District of Columbia. The data necessary for obtaining estimates of labor market characteristics are provided by registered nurses responding to a questionnaire that was designed to capture information about the profile of the RN population and RNs in the workforce. The data are collected over an eight month period by mail, with telephone follow-up for non-respondents. The questionnaire is mailed to a probability sample of RNs selected from the target population.

The universe (sampling frame) from which the sample is drawn is acquired from each of the State Boards of Nursing, and consists of names and addresses of all RNs holding an active license to practice on March 25, 1992. Unlike other population studies, RNs may be licensed in more than one State and may appear in more than one State listing. In order to address the overlap of RNs among States, the State samples are nested. All States are arranged in priority order by size of registration giving highest priority to the States with the smaller number of RNs and the lowest priority to States with the largest number of RNs. If the RN reports having a license in more than one State, then the licensure State is set to be the “highest priority state.” The “highest priority state,” is the State with the smallest number of RNs, in which the RN is licensed.

The data collected includes responses to a questionnaire that elicits information about nursing education (section A), employment status (section B), employment status of RNs not employed in nursing (section C), (4) prior nursing employment status (section D), and (5) general information (section E) which includes both demographic and economic information about the RNs.

## **2. Survey Management**

The NSSRN data are collected and disseminated in accordance with confidentiality provisions within this act and those of the Privacy Act. Data collection for this study was conducted under contract with Research Triangle Institute, North Carolina. As soon as the data collection and editing are completed, the NSSRN is released to the public in staged releases of summary reports and data files. Public Use File (PUF) development support is provided under contract by Social and Scientific Systems, Inc., Silver Spring, Maryland.

A separate findings report is made available as a hard copy document and contains an extensive summary of the major findings from the survey, more than forty tables that are used by the community, a summary of the survey methodology and a copy of the questionnaire. Hard copy documents are made available on CD-ROM or electronic files through the HRSA Clearinghouse at 1(888)-ASK-HRSA, or can be purchased from the National Technical Information Services (NTIS) at (703) 487-4650. The mailing address is 5285 Port Royal Road, Springfield, Virginia 22161. If calling from outside the U.S., dial (410) 381-3150.

Additional information on the NSSRN is available from the HRSA/BHPr, Parklawn Building, Room 8-47, 5600 Fishers Lane, Rockville MD 20857 (301) 443-6315.

## **C. Technical and Programming Information**

This documentation describes the public use data file from the 1992 National Sample Survey of Registered Nurses (NSSRN). There are two public use files for each year of the survey. The General Public Use File contains responses to the questionnaire in the survey, some survey administration variables, an identifier for each respondent record, but no geographical information (except for State and Region of the country, or foreign country). The County Public Use File contains responses to the questionnaire in the survey, some survey administration variables, geographical information, but no identifier for each respondent record. This documentation describes the County Public Use File.

Released as an ASCII file (with related SAS programming statements), this public use file provides information collected on a nationally representative sample of registered nurses who were licensed in the United States in the months preceding the March 1992 Survey date. The 1992 survey is the fifth in a series of the NSSRN surveys. Previous surveys were conducted in 1977, 1980, 1984, and 1988.

The following documentation offers a brief overview of the types and levels of data provided, the content and structure of the files and the codebook, and programming information. It contains the following sections:

1. Data File Information
2. Survey Sample Information

### **1. Data File Information**

This public use data file contains a total of 32,489 records, one per respondent, representing a sample from an estimated 2,572,293 total licensed RN's. This sample was scientifically drawn from among all Registered Nurses who held active licenses around the end of 1991 in one or more of the fifty States and the District of Columbia. All RNs who were sampled and who responded to this study have a positive weight. 128 were sampled and were identified as being deceased or letting their license lapse, and 206 reported that they either worked or lived outside the US. The estimated total RN population residing or employed in the US in 1992 is 2,239,816. For each variable, both weighted and unweighted frequencies are provided in the Codebook.

#### **1.1 Codebook Structure**

The Codebook and data file sequence lists variables in the order of the questions asked in the questionnaire followed by a set of derived variables that are created to facilitate analysis.

The specific questionnaire sections are:

Section A: Education

Section B: Employment status

Section C: Employment status of RNs not employed in nursing

Section D: Prior nursing employment status

Section E: General information

The set of derived variables include information about the following:

Education Constructed Variables

Employment Status Constructed Variables

Demographic Constructed Variables

Survey Administration

Sample Weights and Variance Estimation

## **1.2 Reserved Codes**

The following reserve code values are used:

VALUE	DEFINITION
0      No	When used for a yes/no question, a 0 means no
1      Yes	When used for a yes/no question, a 1 means yes
-6      DECEASED	Respondent is deceased.
-8      NOT APPLICABLE	Question is not applicable. For derived variables, the value will be Not Applicable where one or more of the variables used in the algorithm are themselves Not Applicable.
-9      UNKNOWN/REFUSED	Information is either missing and otherwise unknown or else the respondent has refused to answer the question. For derived variables, the value will be Unknown/Refused where one or more of the variables used in the algorithm are themselves Unknown/Refused.

### 1.3 Codebook Format

The codebook describes an ASCII data set and provides the following programming identifiers for each variable:

IDENTIFIER	DESCRIPTION
Name	Variable name (maximum of 8 characters)
Description	Variable descriptor (maximum 40 characters)
Format	Packing specification within the field width
Type	Type of data: numeric (indicated by NUM) or character (indicated by CHAR)
Start	Beginning column position of variable in record
End	Ending column position of variable in record
Reference	Reference Appendix or page of this document where there is more information about the variable

The codebook provides both unweighted and weighted frequencies for each variable. The codebook for this User's Guide refers to appendices D through K. These appendices are data dictionaries for some of the variables in the public use file. These appendices appear at the end of this document.

### 1.4 Variable Naming

Variable names reflect the question number or the content of the variable, with an 8 character limitation. Survey variables start with a Q to denote their arising directly out of the Survey Questionnaire. Constructed variables and Survey administration variables have descriptive names. If a survey question has multiple parts, the variable names contain an underscore with the right side of the underscore containing the question part (e.g., Q13A\_A, Q13A\_B...). Geographic terms use the following naming conventions:

ST: Numeric State FIPS code  
CO: Numeric County FIPS code  
FIPS: Numeric State and County FIPS code  
MSA: Numeric MSA code  
RG: Numeric Census Division, or Region, code

## **1.5 Variable Notes**

The following descriptive notes explain the meaning of selected constructed variables whose construction is not obvious. These notes are referenced in the codebook by the page number on which they appear in this document.

Occasionally, the formulas for the constructed variables rely on information from the original questionnaire responses that is not available on the respective public use file. In such cases, the variable from the original survey is briefly described when being referenced in the notes below.

Any eligible response categories from the original questionnaire that failed to receive actual responses from those sampled in the Survey were not included in the entries of the Codebook. Such a category removal in no way changes the statistical distributions shown in the Codebook.

The records available for reference in preparing this documentation did not include enumeration of the specific formulae and equations for 1992 recoded variables. Thus, it was not possible to document all of the relationships among the categories of the recoded variables. However, it is believed that the 1992 recoded variables were generally similar to the derivations and transformation equations used in 1996. These two Surveys were very close in formulation and response categories. Known exceptions to this pattern of being similar in 1992 and 1996 were integrated, as appropriate, in the definitions below. These exceptions were mainly in the enumeration of position and setting categories and recodes based on those rely on position and setting responses to the Survey.

### **1.5.1 Education Constructed Variables**

These derived variables are based on responses to one or more education questions. These are summaries on

- basic nursing education preparation,
- highest level of education achieved,
- years since graduation,
- geographic state and region of basic nursing education

#### **Years Since Graduation – Grouped (YRSNC\_GP)**

YRSNC\_GP groups YR\_SINCE into five groups, defined as follows:

- 0-5 years,
- 6-10 years,
- 11-15 years, and
- 16 years and over.

### **Year of Graduation from Basic Nursing Program -- Grouped (GRAD\_YR)**

GRAD\_YR groups Q1B\_YR into eight intervals, defined as follows:

- before 1961,
- 1961 to 1965,
- 1966 to 1970,
- 1971 to 1975,
- 1976 to 1980,
- 1981 to 1985,
- 1986 to 1990, and
- since 1990.

### **Summary of Highest Nursing Educational Preparation (PREPSUM)**

PREPSUM summarizes the RN's highest level of education into four generic groups regardless of whether the highest educational degree is nursing or nursing related. It is derived from the respondent's responses to Q1A, Q4A, and Q4B. The respondent's basic nursing educational preparation is captured in Q1A. For respondents that have earned additional degrees (Q4A=1), the highest degree is captured in Q4B\_i1 to Q4B\_i8. All responses to either master's or doctorate education are regrouped into one combined level that covers both degrees.

### **State of Graduation versus Place of Employment/Residence (GD\_GEOST)**

GD\_GEOST compares the state in which the RN initially received basic RN education (Q1C) to the State in which the RN is located on 3/25/1992, as denoted in G\_ST92. Where the states are the same, a value of 1 is coded. Where the States are different (though both Q1C and G\_ST92 have values between 1 and 56), a value of 2 is coded. Where the RN originally received basic RN education outside the U.S. (where Q1C is of a value greater than 56) or is currently living outside the U.S. (where G\_ST92 is 0), a value of 3 is coded.

### **Graduated from a U.S. or Foreign Basic Nursing Program (GRAD\_WHR)**

GRAD\_WHR indicates whether the location of the basic education program that the nurse graduated from was a U.S. school or in a location outside of the U.S. It is tabulated from responses to Q1C.

### **Region Received Basic Nursing Education (REG\_B\_ED)**

REG\_B\_ED is the geocode for the Census Division (Region) where the respondent received basic nursing education. It is tabulated from responses to Q1C. The list of nine established Region codes is shown in Appendix F. Where the location is outside of the United States (Q1C>56), REG\_B\_ED is coded as a 10. Education received in U.S. Territories/Possessions is considered to be outside of the U.S.

### **1.5.2 Employment Status Constructed Variables**

These variables are constructed from responses to the employment section of the questionnaire. These variables summarize information about:

- employment status,
- employment setting,
- scheduled hours per year,
- position and dominant function,
- geographic region and state of employment, and
- changes in employment between 1991 and 1992.

#### **Detailed Employment Status (EMP\_STAT)**

EMP\_STAT summarizes the nurse's current employment status as of 3/25/92, using responses to Q8, Q15 and Q21 to generate seven categories. These categories are as follows:

- full time in nursing,
- part time in nursing,
- full time not in nursing,
- part time not in nursing,
- unknown status for those employed in nursing,
- unknown status for those not employed in nursing, and
- those not employed at all.

For those employed in nursing, this variable combines Q8 (current employment status in nursing) and Q15 (full-time/part-time employment status). For those not employed in nursing or not employed at all, this variable combines Q8, Q21A (employment in another occupation) and Q21B (full-time/part-time employment status in another occupation).

#### **Employment Status in 1992 (EMPL\_92)**

EMPL\_92 indicates the RN employment status in nursing as of 03/25/1992. It is a combination of responses to Q8 (current employment status in nursing) and Q15 (full-time/part-time employment status). Those not employed in nursing are coded as EMPL\_92=4.

#### **Employment Status in 1991 (EMPL\_91)**

EMPL\_91 indicates the RN employment status in nursing as of 03/25/1991. It is a combination of responses to Q23A (employment status in nursing one year ago) and Q23B (full-time/part-time employment status a year ago). Those not employed in nursing are coded as EMPL\_91=4.

### **Employment Status in 1992 in Comparison to 1991 (EMP92\_91)**

EMP92\_91 compares the respondent's employment status in nursing on 03/25/1992 (EMPL\_92) to the employment status in nursing on 03/25/1991 (EMPL\_91). It reflects changes in full time and part time status as well as any overall changes with the employment in nursing. Nine categories are defined as follows:

- full time employment in nursing in both years,
- full time employment in nursing in 1992 and part time employment in nursing in 1991,
- full time employment in nursing in 1992 and not employed in nursing in 1991,
- part time employment in nursing in 1992 and full time employment in nursing in 1991,
- part time employment in nursing in both 1991 and 1992,
- part time employment in nursing in 1992 and not employed in nursing in 1991,
- not employed in nursing in 1992 and full time employment in nursing in 1991,
- not employed in nursing in 1992 but part time employment in nursing in 1991, and
- not employed in nursing in both 1991 and 1992.

### **Employment through Temporary Employment Service (EMPL\_TES)**

EMPL\_TES captures whether a respondent employed in nursing (Q8=1) is employed by a temporary employment service in their principal or secondary nursing position. Each employed respondent is asked about their principal nursing position in Q10 and secondary nursing position in Q19. The recoded variable separately categorizes the primary and secondary employment of the RN into four circumstances, as follows:

- having temporary employment service as only their primary employment in nursing,
- having temporary employment service as only their secondary employment in nursing,
- having temporary employment services for both primary and secondary employment in nursing, and
- not having any nursing employment through a temporary employment service.

### **1992 Employment Setting Summary (SETSUM92)**

Q11 identifies the principal health care setting for their primary nursing position of RN's employed in nursing as of March 25, 1992. SETSUM92 collapses the 58 detailed categories of Q11 into 8 categories. For each respective SETSUM92 category, the original Q11 values aggregated for that value of SETSUM92 are also shown below:

- hospital = 110 to 150,
- nursing home/extended care = 210 to 245,
- nursing education = 310 to 350,
- public health or community health = 400 to 466,
- student health = 510 to 540,
- occupational health = 610 to 630,
- ambulatory care owned or not owned by RN = 710 to 791, and
- other miscellaneous setting = 910 to 973.

### **1991 Employment Setting Summary (SETSUM91)**

Q23D identifies the principal health care setting for the primary nursing position of RN's employed in nursing one year prior to the survey year (on March 25, 1991). SETSUM91 collapses the 58 detailed categories in Q23D into 8 categories. For each respective SETSUM91 category, the original Q23D values aggregated for that value of SETSUM91 are shown below:

- hospital = 110 to 150,
- nursing home/extended care = 210 to 245,
- nursing education = 310 to 350,
- public health or community health = 400 to 466,
- student health = 510 to 540,
- occupational health = 610 to 630,
- ambulatory care owned or not owned by RN = 710 to 791, and
- other miscellaneous setting = 910 to 973.

### **Employment Setting 1991 versus 1992 (SET91\_92)**

SET91\_92 summarizes changes in employment setting between 1991 and 1992. SET91\_92 indicates whether the RN is employed in the same setting (Q23D=Q11) or in a different setting (Q23D does not equal Q11).

### **Scheduled Hours per Year (HRS\_YR)**

HRS\_YR is derived from the combination of responses to Q16A and Q17. The value is the product of Q16A (the number of hours worked in the principal job during a normal workweek, including overtime) and Q17 (the number of weeks in the respondents normal work year).

### **Position Title – Grouped (POSITION)**

All respondents who indicated that they were employed in nursing were asked in Q12 to select the position title that was most-closely related to the position title for their principal nursing position. POSITION collapses the 31 response categories in Q12 into 13 categories. For each respective POSITION category, the original Q12 values aggregated for that value of POSITION are shown below:

- administrator or assistant administrator = 1, 6, or 7,
- consultant = 5,
- supervisor = 27,
- instructor = 12, 13, and 21,
- head of nursing or assistant head of nursing = 10,
- staff or general duty nurse = 3, 9, 22, 26, 28, and 29,
- nurse practitioner or nurse midwife = 17 and 18,
- clinical nurse specialist = 4,
- nurse clinician = 15,
- certified nurse anesthetist = 2,
- researcher = 24,
- private duty nurse = 22,
- other = 8, 11, 14, 16, 19, 23, 30, and 31.

### **Weeks That RN is Seeking a Nursing Position (SEEKTIME)**

SEEKTIME is based on the responses of RN's who were not working in nursing and were seeking a position in nursing. SEEKTIME summarizes responses to Q22B (how many weeks they have been seeking nursing employment) into 10 time periods, as follows:

- <1 week,
- 1 week,
- 2 weeks,
- 3 weeks,
- 4 weeks,
- 5-9 weeks,
- 10-14 weeks,
- 15-34 weeks,
- 35-52 weeks, and
- >= 53 weeks.

### **Region of Employment (REG\_EMPL)**

REG\_EMPL is the geocode for the Census Division (Region) for the respondent's principal nursing position as of 3/25/1992. It is tabulated from the responses to Q9\_ST. The list of nine established Region codes is shown in Appendix F. Where the location is outside of the United States (Q9\_ST>56), REG\_EMPL is coded as 10. Residence and employment in U.S. Territories/Possessions is considered to be outside of the U.S.

### **Dominant Function in Principal Nursing Position (DOMFUNCT)**

DOMFUNCT uses responses to Q13A to identify the function which occupies more than 50% of time in the RN's principal nursing position during a usual work week. If no function covers more than 50% of time, DOMFUNCT is coded as '8', for 'No Dominant Function'.

- Administration
- Consultation with agency
- Direct patient care
- Research
- Supervision
- Teaching in nursing/health care occupation
- Other

### **Years Since Last Worked for Pay as an RN (LST\_WRKD)**

RN's who report not being employed in nursing at the time of the survey were asked to report the number of years since they have worked for pay as an RN (Q20\_YR). The variable LST\_WRKD groups the response to Q20 into seven categories, as follows:

- <1 year,
- 1-4 years,
- 5-9 years,
- 10-19 years,
- 20-29 years,
- >= 30 years, and
- never worked as a nurse.

### **State RN Obtained First License versus Place of Employment/Residence for 1992 (LI\_RESST)**

LI\_RESST indicates if the RN is employed in the State in which they obtained their first license to practice (i.e., where G\_ST92 = Q32B\_ST). Q32B\_ST is the State in which the respondent was first licensed; G\_ST92 is the State of employment in nursing as of March 25, 1992 if the registered nurse is employed in nursing (Q8=1), or the State of residence if the nurse reports not being employed in nursing (Q8=0).

### **1.5.3 Demographic Information**

The demographic constructed variables include age, race/ethnicity, marital status, and geographic state and region of employment and/or residence (for 1992 and 1991). Age is computed using year of birth. Marital status and children are constructed variables that combine responses to two questions: marital status and a categorical variable regarding the number of children.

#### **Age of Nurses – Grouped (AGE\_GP)**

AGE\_GP is a derived variable that aggregates AGE into 10 categories defined, as follows:

- <25 years,
- 25-29 years,
- 30-34 years,
- 35-39 years,
- 40-44 years,
- 45-49 years,
- 50-54 years,
- 55-59 years,
- 60-64 years, and
- >= 65 years.

#### **Marital Status and Children (MAR\_CHLD)**

MAR\_CHLD combines information from Q27 on marital status with Q28 on whether children are at home.

The 11 categories of MAR\_CHILD are as follows:

- married with children under 6,
- married with children over 6,
- married with children both under and over 6,
- married with no children at home,
- married but the number of children at home is unknown,
- widowed/separated/divorced with children under 6,
- widowed/separated/divorced with children over 6,
- widowed/separated/divorced with children both under and over 6,
- widowed/separated/divorced with no children at home,
- widowed/separated/divorced but the number of children at home is unknown, and
- never married.

The never married category covers all RN's who were never married, regardless of the presence of children at home.

### **Race/Ethnic Background (RACE\_GP)**

RACE\_GP summarizes racial/ethnic background (Q26) into two groups,

- white, and
- other.

### **Geocode for State on 3/25/1992 (G\_ST92)**

G\_ST92 is the numeric FIPS state code that identifies, as follows below, the State where the RN is employed in nursing, or the place of residence if the RN is not employed in nursing, on 3/25/1992:

- when employed in nursing (Q8=1) on 3/25/1992 = the State of employment of the principal nursing position (Q9\_ST), or
- when not employed in nursing (Q8=0) on 3/25/1992 = the State of residence (Q30\_ST) where the RN was living on 3/25/1992.

The list of States and their respective FIPS codes are shown in Appendix D. When the location is outside of the U.S., G\_ST92 is 0. Residence and employment in U.S. Territories or Possessions is considered to be outside of the U.S.

### **Geocode for State on 3/25/1991 (G\_ST91)**

G\_ST91 is the numeric FIPS state code that identifies, as follows below, the State where the RN was employed in nursing, or otherwise lived, on 3/25/1991:

- when actively employed in nursing (Q23A=1) on 3/21/1991 = the State where the RN was employed in their principal nursing position (Q23C\_ST), or
- when not employed in nursing on 3/25/1991 or the nursing employment status is unknown, (Q23A=0 or -9) = the State of residence (Q31B\_ST) where the RN was living.

The list of States and their respective FIPS codes are shown in Appendix D. When the location was outside of the U.S., the convention is to code G\_ST91 is 0. Residence and employment in U.S. Territories/Possessions is considered to be outside of the U.S.

### **Geocode for Census Division (Region) on 3/25/1992 (G\_RG92)**

G\_RG92 is the geocode for the Census Division (region) where the RN primarily worked or lived on 3/25/1992. The list of nine established Region codes is shown in Appendix F. G\_RG92 is based on the State geocode, G\_ST92.

- when employed in nursing (Q8=1) on 3/25/1992 = the Census Division where the RN was employed in the principal nursing position, or
- when not employed in nursing (Q8=0) on 3/25/1992 = the Census Division of residence.

When the location is outside of the U.S. (G\_ST92=0), G\_RG92 is coded as 10. Residence and employment in U.S. Territories/Possessions is considered to be outside of the U.S.

### **Geocode for Census Division (Region) on 3/25/1991 (G\_RG91)**

G\_RG91 is the geocode for the Census Division (region) where the RN primarily worked or lived on 3/25/1991. The list of nine established Region codes is shown in Appendix F. G\_RG92 is based on the State geocode, G\_ST91.

- when employed in nursing (Q23A=1) on 3/25/1991 = the Census Division where the RN was employed in the principal nursing position, or
- when not employed in nursing (Q23A=0) on 3/25/1991= the Census Division of residence.

When the location was out of the U.S. (G\_ST91=0), G\_RG91 is coded as a 10.

Residence and employment in U.S. Territories/Possessions is considered to be outside of the U.S.

### **Metropolitan Statistical Area (MSA) Geocode Status for 1992 (G\_MSA\_92)**

G\_MSA\_92 is the summary descriptor of the RN's metropolitan area status on 3/25/1992, as follows below:

- when not located in an MSA on 3/25/1992 = 1,
- when the address on 3/25/1992 is located in an MSA, with GMSA\_92 valued between 1 and 9996 = 2, or
- when outside of the U.S. on 3/25/1992 = 3.

See the County Public Use File documentation and Appendix G for the full detailed list of MSA codes which are to be used in conjunction with variable G\_MSA92 of the County Public Use File.

### **Geocode for Metropolitan Statistical Area for 1992 (G\_MSA92)**

G\_MSA92 is the geocode for the Metropolitan Statistical Area (MSA) for the RN on 3/25/1992 and derived as follows:

- when employed in nursing (Q8=1) on 3/25/1992 within a U.S. metropolitan area = the geocode for the metropolitan area for the principal nursing position (Q9\_MSA), with values from 1 to 9996,
- when employed in nursing (Q8=1) on 3/25/1992 in the U.S. but outside a metropolitan area = -7,
- when not employed in nursing (Q8=0) on 3/25/1992, but residing within a U.S. metropolitan area = the geocode for the metropolitan area of residence (Q30\_MSA) where the RN was living, with values from 1 to 9996,
- when not employed in nursing (Q8=0) on 3/25/1992, but residing in the U.S. outside a metropolitan area = -7, or
- when living outside of the U.S. on 3/25/1992 (Q30\_MSA=0) = 0,

The list of Metropolitan Statistical Areas of 1992 and their respective FIPS codes are shown in Appendix G. Residence or employment in U.S. Territories/Possessions is considered to be outside of the U.S.

### **Geocode for Metropolitan Statistical Area on 3/25/1991 (G\_MSA91)**

G\_MSA91 is the geocode for the Metropolitan Statistical Area (MSA) for the RN on 3/25/1991 and derived as follows:

- when employed in nursing on 3/25/1991 (Q23A=1) within a U.S. metropolitan area = the geocode for the metropolitan area for the principal nursing position (Q23C\_MSA), with values from 1 to 9996,
- when employed in nursing (Q23A=1) on 3/25/1991 in the U.S. but outside a metropolitan area = -7,
- when not employed in nursing (Q23A=0) on 3/25/1991, but resided within a U.S. metropolitan area = the geocode for the metropolitan area of residence (Q31B\_MSA) where the RN was living, with values from 1 to 9996,
- when not employed in nursing (Q23A=0) on 3/25/1991, but residing in the U.S. outside a metropolitan area = -7, or
- when living outside of the U.S. on 3/25/1991 (Q23C\_ST=0) = 0.

The list of Metropolitan Statistical Areas of 1991 and their respective FIPS codes are shown in Appendix G. Residence or employment in U.S. Territories/Possessions is considered to be outside of the U.S.

### **Geocode for County on 3/25/1992 (G\_CO92)**

G\_CO92 is the FIPS code identifying the county for the RN on 3/25/1992 and derived as follows:

- when employed in nursing in the U.S. (Q8=1) on 3/25/1992 = the geocode for the county of the principal nursing position (Q9\_CO), with values of 1 to 996,
- when not employed in nursing (Q8=0) on 3/25/1992, but residing in the U.S. = the geocode for the county of residence (Q30\_CO) where the RN was living, with values of 1 to 996,
- when living outside of the U.S. on 3/25/1992 (Q30\_CO=0) = 0,

The list of Metropolitan Statistical Areas and the FIPS codes for any counties within their domain are shown in Appendix G. Residence or employment in U.S. Territories/Possessions is considered to be outside of the U.S.

### **Geocode for County on 3/25/1991 (G\_CO91)**

G\_CO91 is the FIPS code identifying the county for the RN on 3/25/1991 and derived as follows:

- when employed in nursing in the U.S. (Q23A=1) = the geocode for the county of the principal nursing position (Q23C\_CO) on 3/25/1991, with values of 1 to 996,
- when not employed in nursing (Q23A=0), but residing in the U.S. on 3/25/1991 = the geocode for the county of residence (Q31B\_CO) where the RN was living, with values of 1 to 996,
- when living outside of the U.S. on 3/25/1991 (Q31B\_CO=0) = 0,

The list of Metropolitan Statistical Areas and the FIPS codes for any counties within their domain are shown in Appendix G. Residence or employment in U.S. Territories/Possessions is considered to be outside of the U.S.

### **Geocode for State and County on 3/25/1992 (G\_FIPS92)**

G\_FIPS92 is the 1992 FIPS State (G\_ST92) and county code (G\_CO92), combined into one variable. G\_FIPS92 is the FIPS State and county code (See Appendix G) identifying the location of the RN's principle employment in nursing or residence on 3/25/1992. The FIPS codes have values from 1001 to 56113. When the location is outside of the U. S., G\_FIPS92 is 0. Residence or employment in U.S. Territories/Possessions is considered to be outside of the U.S.

### **Geocode for State and County on 3/25/1991 (G\_FIPS91)**

G\_FIPS91 is the 1991 FIPS state (G\_ST91) and county code (G\_CO91) combined into one variable. G\_FIPS91 is the FIPS state and county code (See Appendix G) identifying the location of the RN's principle employment in nursing or residence on 3/25/1991. The FIPS codes have values from 1001 to 56113. When the location is outside of the U. S., G\_FIPS91 is 0. Residence or employment in U.S. Territories/Possessions is considered to be outside of the U.S.

### **State of Residence the same in 1991 and 1992 (RST\_SME)**

RST\_SME summarizes the comparison between the responses to the RN's State of residence on March 25, 1992 (Q30\_ST), and the RN's State of residence on March 25, 1991 (Q31B\_ST), as follows:

- the RN resides in the same State = 1,
- the RN resides in a different State = 2, or
- the RN lived outside the US in either 1991 or 1992 = 3.

### **County of Residence the same in 1991 and 1992 (RCTY\_SME)**

RCTY\_SME summarizes the comparison between the responses to the RN's County of residence on March 25, 1992 (Q30\_CO), and the RN's State of residence on March 25, 1991 (Q31B\_CO), as follows:

- the RN resides in the same county = 1,
- the RN resides in a different county = 2, or
- the RN lived outside the US in either 1991 or 1992 = 3.

### **Region of Residence 1992 (REG\_RESI)**

REG\_RESI is the geocode for the RN's Region of residence as of 3/25/1992. It is tabulated from the Survey responses to Q30\_ST (place of residence). The list of nine established Census Division, Region codes is shown in Appendix F. When the location is outside of the United States (Q30\_ST=0), REG\_RESI is coded as 10. Residence in U.S. Territories/Possessions is considered to be outside of the U.S.

#### **1.5.4 Survey Administration**

The survey administration variable information contains information related to the sample selection and the mode of data collection.

##### **RN Working/ Living in US on 3/25/1992 (RN\_POP)**

RN\_POP summarizes whether the RN was working or living in the United States at the time of the survey on 3/25/1992. The RN\_POP categories are as follows:

- working or living outside the United States on 3/25/1992 = 1. (See G\_ST92 for discussion of how working or living outside the United States is derived). Residence and employment in U.S. Territories/Possessions is considered to be outside of the U.S.,
- working or living within the United States = 2, or
- not being alive at the time of the survey (DEATH=1) or no being longer eligible as a licensed RN at the time of the survey date of 3/25/1992 (ELIGFLAG=0) = 3.

#### **1.5.5 Sample Weights and Variance Estimation**

The use of sample weights permits the derivation of national and State level estimates of the registered nurse population and subgroups of this population based on sample data. A single full sample weight (WEIGHT) for each RN is provided for the public use file. In addition, 20 replicate weights are provided for variance estimation.

##### **Basic Weight for the Whole Sample (WEIGHT)**

An RN level full sample weight (WEIGHT) was created for responding RNs who are eligible to be included in the sample. A weight was assigned to each eligible registered nurse, who held an active license. This weight reflects the original probability of selection of the RN, ratio adjusted for non-participation (nonresponse), multiple license assignment, and age. Overall, the registered nurse population living or working in 1992 in the U.S. was 2,239,816.

##### **Variance Estimation**

To obtain estimates of variability such as standard errors or corresponding confidence intervals, for estimates based on the NSSRN data, one needs to take into account the complex survey design of the NSSRN. Various approaches could be used to generate such estimates including the Taylor series approximation, the balanced repeated replications or the jackknife. For the NSSRN, it was determined that jackknife replication is the best method for estimating the variability.

##### **Weight for Replicate Samples (WEIGHT01 – WEIGHT20)**

When data are collected as part of a complex survey, there is often no easy way to produce approximate unbiased design consistent estimates of variance analytically. The

variance of survey statistics from SAS and SPSS are inappropriate and generally too small. A technique called jackknife replication method is used for estimating variances from the NSSRN.

The basic idea is to select subsamples repeatedly from the whole sample, calculate the sampling weights for each of these subsamples (WEIGHT01 – WEIGHT20), calculate the statistic of interest for each of the subsamples, and then use the variability among these subsamples (replicates) to estimate the variance for the full sample.

### Description of How to Calculate Variances

The National Survey of Registered Nurses uses a jackknife replication method for variance estimation. The specific design for this study has 20 replicates (from 20 pairs of alpha-segments (PSU's)) and thus 20 degrees of freedom. In the jackknife replication method, multiple replicates are constructed from a subset of the data, and the variance of the estimate is calculated as the variance across all the replicates. In the case of the NSSRN, 20 replicates are created by pairing the 40 PSU's into 20 pairs, and dropping one PSU from each pair systematically. A few computer programs will correctly estimate variances with this design, including SUDAAN (version 8) and WesVar. SUDAAN calculates the variances in a manner nearly identical to the SAS macro used in the creation of the tables in Appendix B of the *The Registered Nurse Population, Findings from the NSSRN, March 1992*. However, SUDAAN provides for an adjustment factor that corrects for the additional variation caused by the replicate weights that is not present in the full sample. This adjustment, equal to the number of PSU's in each replicate divided by the total number of replicates ( $39/40 = 0.975$ ) reduces the variance estimates by about 1.25%, and is specified on the ADJJACK option of the JACKWGTS statement.

### SUDAAN Version 8 Example for 1992 National Survey of Registered Nurses

Below we provide an example using SAS Callable SUDAAN Version 8. Users of standalone SUDAAN will need to modify certain pieces of the code as appropriate:

```
proc crosstab DATA=work.RN92DATA FILETYPE=SAS DESIGN=JACKKNIFE;
  WEIGHT    weight;
  jackwgts  weight01-weight20 /adjjack=0.975;
  rtitle    "1992 National Nursing Survey";
  rtitle    "Table B-2, Jackknife Replicate Estimates";
  rtitle    "Using (40-1) / 40 = 0.975 as the ADJJACK Factor";
  subpopn   rn_pop = 2;
  subgroup  PREPSUM
  levels    6;
  rformat   prepsum prepsum.;
  print     nsum wsum sewgt rowper serow
            / nsumfmt=f6.0 wsumfmt=f9.0 sewgtfmt=f9.0
              rowperfmt=f8.2 serowfmt=f9.5;
run;
```

Users are cautioned that the data as provided on the Public Use File may not be in suitable categories with regard to SUDAAN. In particular, for categorical variables, negative and zero values are not allowed, and the categories must go from 1 to k, with k being the number of levels. See the SUDAAN Version 8 User's Manual for more details.

Results for this example are as follows:

Variance Estimation Method: Replicate Weight Jackknife  
 For Subpopulation: RN\_POP = 2  
 1992 National Nursing Survey, Table B-2, Jackknife Replicate Estimates  
 Using  $(40-1) / 40 = 0.975$  as the ADJJACK Factor  
 by: HIGHEST NURSING EDUCATIONAL PREP-SUMMARY.

As mentioned above, SUDAAN with the ADJJACK is more efficient (lower variance) than the SAS macro used to prepare the report *The Registered Nurse Population, Findings from the NSSRN, March 1992*. The numbers in Tables 1 and 2 below for Factor=1 do not exactly match the numbers in Tables B-2 and B-3 of the Findings report because there have been some data revisions since the previous publication of these tables. A comparison using the estimates for Factor=1 indicates an improvement of about 1.25% in the variances (standard errors), when a Factor of .975 is used. Tables 1 and 2 below show the comparison.

\* There is a 1.258 Percent difference in the standard error between using a factor of 1 and using a factor of 0.975. (numbers in the table are rounded so that percent differences may not appear to be exact).

## **2. Survey Sample Information**

### **2.1 Sample Design and Response Rates**

The respondent universe for the National Sample Survey of Registered Nurses 1992 (NSSRN) includes all RNs holding at least one current active license from one of the 50 States or the District of Columbia at the time of sample selection. For each State, a file or files containing a complete list of all currently licensed RNs was used as the source of the sample (the sampling frame). This survey's design follows that of the other six surveys. The State agencies responsible for licensing are very familiar with the process and securing cooperation was a straightforward procedure.

Each State's current RN licenses were considered a stratum for sample selection. Different sampling rates were set for each State based on considerations of the statistical precision of the estimates and the costs involved. There were about 2.6 million licenses issued to RNs at that time and about 45,130 selected to be part of the 1992 sample. The 1992 survey estimated that there were about 2.2 million individuals with licenses in the United States who were employed in nursing. Since nurses may hold licenses in more than one State, the 45,130 included in the actual sample selection represent licenses rather than individual RNs.

The NSSRN is designed to produce estimates at the national and state level for the active licensed registered nurse as of March 25, 1992. It is a cross-sectional survey conducted once every four years. For details about the sample design, see Appendix B of this User's Guide. The response rate for the 1992 NSSRN was 79.7%.

## **D. Codebook**

National Sample Survey of Registered Nurses 1992  
County Public Use File  
Introduction

This codebook describes the National Sample Survey of Registered Nurses county public use file for 1992, RN92Cnty.TXT. The file, which is distributed in ASCII format, contains 193 variables and 32,608 nurse-level records. In addition to this introduction, the codebook consists of three parts, an alphabetical listing of the variables, a positional listing of the variables, and the main portion of the codebook containing unweighted and weighted counts, and descriptive information on a variable-by-variable basis.

#### Codebook Order

The variables included on the file are ordered based on the questions appearing in the survey instrument, with some non-questionnaire related variables appearing at the end. The variables appear in the codebook in the following order:

- Section A: Education
- Section B: Employment status
- Section C: Employment status of RNs not employed in nursing
- Section D: Prior nursing employment status
- Section E: General information

The set of derived variables include information about the following:

- Education Constructed Variables
- Employment Status Constructed Variables
- Demographic and County Information
- Survey Administration
- Sample Weights and Variance Estimation

#### Variable Listings

The codebook contains lists of the variables on the file in alphabetical and positional order. Each list includes the start and end column position, variable name, and a brief description or label for the variable. This description is limited to 40 characters. The same 40 character descriptions are also provided in the LABEL statement section of the SAS user file provided with the public use file.

## Main Codebook

The main portion of the codebook follows the alphabetical and positional listings. Unweighted and weighted counts for each variable are displayed. The counts and percentages for each variable are arranged such that missing data (e.g. -9: Unknown/Refused, -8: Inapplicable) appears first, followed by valid data. If a variable is a continuous or semi continuous variable (like a year or a percentage), then the values are detailed as a range of values (for example, for the variable Q18, 1-\$192,000 means that the actual data values are between 1 and 192,000). In addition, a number of informational fields about each variable are included to assist the user in working with the data. These include:

Name	Variable name (maximum of 8 characters)
Description	Variable descriptor (maximum 40 characters)
Format	Number of bytes
Type	Type of data: numeric (indicated by NUM) or character (indicated by CHAR)
Start record	Beginning column position of variable in
End record	Ending column position of variable in
Reference	Reference Appendix or page of the User's Guide where there is more information about the variable

Additional information on variable construction and editing, as well as specific information on selected variables is included in Section C of the User Guide.
