Appendix G. Metropolitan Areas and Components, 2000, with FIPS Codes

A. Data Use Agreement

Individual identifiers have been removed from the data file. Nevertheless, under section 308 (d) and 903 (c) of the Public Service Act (42 U.S.C. 242m and 42 U.S.C. 299 a-1), data collected by the Bureau of Health Professions (BHP), Health Resources and Services Administration (HRSA), may not be used for any purpose other than for the purpose for which it was supplied; any effort to determine the identity of any reported individual, is prohibited by Law.

Therefore, in accordance with the above Federal Statute, it is understood that:

No one is to use the data in this data set in any way except for statistical reporting and analysis; and

If the identity of any person or establishment should be discovered inadvertently, then (a) no use will be made of this knowledge, (b) The Bureau of Health Professions will be made aware of this incident, (c) the information that would identify that individual will be safeguarded or destroyed, as requested by the Bureau of Health Professions, and (d) no one else will be informed of the discovered identity.

No one will attempt to link this data set with individual identifiable records from any data sets other than the National Sample Survey of Registered Nurses (NSSRN).

By using this data you signify your agreement to comply with the above stated statutorily based requirements with the knowledge that deliberately making a false statement in any matter within the jurisdiction of any Department or agency of the Federal Government violates 18 U.S.C. 1001 and is punishable by a fine of up to \$10,000 or up to 5 years in prison.

HRSA/BHP requests that users cite HRSA/BHP and the National Sample Survey of Registered Nurses as a data source in any publications or research based upon these data.

B. Introduction

This documentation describes one in a series of public use files from the National Sample Survey of Registered Nurses (NSSRN). Data from these periodic surveys provide the basis for evaluating the trends in, the availability of, and projection of future supply of nursing resources at the national and the State levels.

This is the seventh study and was conducted in March 2000. Previous studies were conducted in September 1977; November 1980 and 1984; and March 1988, 1992, and 1996.

1. Background

The NSSRN assists the Health Resources and Services Administration (HRSA), Bureau of Health Professions (BHPr), in carrying out three congressional mandates. Under Title IX, Public Law 94-63, Nurse Training Act of 1975, Section 951 requires the gathering of data that will provide national and State level estimates on the: (a) number and distribution of nurses, by type of employment and location practice, (b) number of nurses practicing full-time and part-time within the United States and within each State and the District of Columbia, (c) average rates of compensation for nurses, by type of practice and location of practice, (d) the activity status of the total number of nurses with advanced training or graduate degrees in nursing by specialty including nurse practitioners, nurse clinicians, nurse researchers, nurse educators, and nurse supervisors and administrators, and (e) number of nurses entering the United States annually from other nations. Section 806 (f) of Public Law 105-392, the Health Professions Education Partnerships Act of 1998 requires discipline workforce information and analytical activities for advanced nursing education, workforce diversity, and basic nursing education and practice. Section 792 of the PHS Act (42 USC 295k) calls for a program to collect, compile, and analyze data on health professions including nurses.

In addition to providing an integrated, in-depth picture of the total RN population to meet legislative requirements, the sample surveys are used to assess the impact of current Federal programs for nursing, and to evaluate the need for, and the nature of, future Federal interventions. The NSSRN has been viewed throughout the Department, other Departments and Agencies within the Executive branch and congressional offices and agencies as the key source of background data on RNs.

The target population for this study is all RNs with active licenses in the 50 States and the District of Columbia. The data necessary for obtaining estimates of labor market characteristics are provided by registered nurses responding to a questionnaire that was designed to capture information about the profile of the RN population and RNs in the workforce. The data are collected over an eight month period by mail, with telephone follow-up for non-respondents. The questionnaire is mailed to a probability sample of RNs selected from the target population.

The universe (sampling frame) from which the sample is drawn is acquired from each of the State Boards of Nursing, and consists of names and addresses of all RNs holding an active license to practice on March 22, 2000. Unlike other population studies, RNs may be licensed in more than one State and may appear in more than one State listing. In order to address the overlap of RNs among States, the State samples are nested. All States are arranged in priority order by size of registration giving highest priority to the States with the smaller number of RNs and the lowest priority to States with the largest number of RNs. If the RN reports having a license in more than one State, then the licensure State is set to be the “highest priority state.” The “highest priority state,” is the State with the smallest number of RNs, in which the RN is licensed. In the 2000 Survey, minorities were over-sampled in order to get a better estimate of the characteristics of minorities in the workforce.

The data collected includes responses to a questionnaire that elicits information about nursing education (section A), employment status (section B), employment status of RNs not employed in nursing (section C), (4) prior nursing employment status (section D), and (5) general information (section E) which includes both demographic and economic information about the RNs.

2. Survey Management

The NSSRN data are collected and disseminated in accordance with confidentiality provisions within this act and those of the Privacy Act. Data collection for this study was conducted under contract with Research Triangle Institute, North Carolina. As soon as the data collection and editing are completed, the NSSRN is released to the public in staged releases of summary reports and data files. Public Use File (PUF) development support is provided under contract by Social and Scientific Systems, Inc., Silver Spring, Maryland.

A separate findings report is made available as a hard copy document and contains an extensive summary of the major findings from the survey, more than forty tables that are used by the community, a summary of the survey methodology and a copy of the questionnaire. Hard copy documents are made available on CD-ROM or electronic files through the HRSA Clearinghouse at 1(888)-ASK-HRSA, or can be purchased from the National Technical Information Services (NTIS) at (703) 487-4650. The mailing address is 5285 Port Royal Road, Springfield, Virginia 22161. If calling from outside the U.S., dial (410) 381-3150.

Additional information on the NSSRN is available from the HRSA/BHPr, Parklawn Building, Room 8-47, 5600 Fishers Lane, Rockville MD 20857 (301) 443-6315.

C. Technical and Programming Information

This documentation describes the public use data file from the 2000 National Sample Survey of Registered Nurses (NSSRN). There are two public use files for each year of the survey. The General Public Use File contains responses to the questionnaire in the survey, some survey administration variables, an identifier for each respondent record, but no geographical information (except for State and Region of the country, or foreign country). The County Public Use File contains responses to the questionnaire in the survey, some survey administration variables, geographical information, but no identifier for each respondent record. This documentation describes the General Public Use File.

Released as an ASCII file (with related SAS programming statements), this public use file provides information collected on a nationally representative sample of registered nurses who were licensed in the United States in the months preceding the March 2000 Survey date. The 2000 survey is the seventh in a series of the NSSRN surveys. Previous surveys were conducted in 1977, 1980, 1984, 1988, 1992, and 1996.

The following documentation offers a brief overview of the types and levels of data provided, the content and structure of the files and the codebook, and programming information. It contains the following sections:

1. Data File Information
2. Survey Sample Information

1. Data File Information

This public use data file contains a total of 35,579 records, one per respondent, representing a sample from an estimated 2,714,671 total licensed RN's. This sample was drawn from among all Registered Nurses who held active licenses around the end of 1999 in one or more of the fifty States and the District of Columbia. All RNs who were sampled and who responded to this study have a positive weight. Ninety-seven were sampled and were identified as being deceased or letting their license lapse, and 124 reported that they either worked or lived outside the US. The estimated total RN population residing or employed in the U.S. in 2000 is 2,696,540. For each variable, both weighted and unweighted frequencies are provided in the Codebook.

1.1 Codebook Structure

The Codebook and data file sequence lists variables in the order of the questions asked in the questionnaire followed by a set of derived variables that are created to facilitate analysis.

The specific questionnaire sections are:

Section A: Education

Section B: Employment status

Section C: Employment status of RNs not employed in nursing

Section D: Prior nursing employment status

Section E: General information

The set of derived variables include information about the following:

Education Constructed Variables

Employment Status Constructed Variables

Demographic Constructed Variables

Survey Administration

Sample Weights and Variance Estimation

1.2 Reserved Codes

The following reserve code values are used:

VALUE	DEFINITION
0 No	When used for a yes/no question, a 0 means no
1 Yes	When used for a yes/no question, a 1 means yes
-6 DECEASED	Respondent is deceased.
-8 NOT APPLICABLE	Question is not applicable. For derived variables, the value will be Not Applicable where one or more of the variables used in the algorithm are themselves Not Applicable.
-9 UNKNOWN/REFUSED	Information is either missing and otherwise unknown or else the respondent has refused to answer the question. For derived variables, the value will be Unknown/Refused where one or more of the variables used in the algorithm are themselves Unknown/Refused.

1.3 Codebook Format

The codebook describes an ASCII data set and provides the following programming identifiers for each variable:

IDENTIFIER	DESCRIPTION
Name	Variable name (maximum of 8 characters)
Description	Variable descriptor (maximum 40 characters)
Format	Packing specification within the field width
Type	Type of data: numeric (indicated by NUM) or character (indicated by CHAR)
Start	Beginning column position of variable in record
End	Ending column position of variable in record
Reference	Reference Appendix or page of this document where there is more information about the variable

The codebook provides both unweighted and weighted frequencies for each variable. The codebook for this User's Guide refers to appendices D through K. These appendices are data dictionaries for some of the variables in the public use file. These appendices appear at the end of this document.

1.4 Variable Naming

Variable names reflect the question number or the content of the variable, with an 8 character limitation. Survey variables start with a Q to denote their arising directly out of the Survey Questionnaire. Constructed variables and Survey administration variables have descriptive names. If a survey question has multiple parts, the variable names contain an underscore with the right side of the underscore containing the question part (e.g., Q13A_A, Q13A_B...). Geographic terms use the following naming conventions:

ST: Numeric State FIPS code
CO: Numeric County FIPS code
FIPS: Numeric State and County FIPS code
MSA: Numeric MSA code
RG: Numeric Census Division, or Region, code

1.5 Variable Notes

The following descriptive notes explain the meaning of selected constructed variables whose construction is not obvious. These notes are referenced in the codebook by the page number on which they appear in this document. Occasionally, the formulas for the constructed variables rely on information from the original questionnaire responses that is not available on the respective public use file. In such cases, the variable from the original survey is briefly described when being referenced in the notes below. Also, in a few instances, particular response categories from the survey questionnaire did not actually generate any responses from the respondents. Such categories, without any responses, were deleted from the entries in the codebook documentation.

1.5.1 Education Constructed Variables

These derived variables are based on responses to one or more education questions. These are summaries on

- basic nursing education preparation,
- highest level of education achieved,
- years since graduation,
- geographic state and region of basic nursing education, and
- whether these RNs were also trained as Advanced Practice Nurses (APN).

Years since Graduation from Basic Nursing Program (YR_SINCE)

YR_SINCE identifies the number of years between graduation and the year of the survey (2000). It is derived from Q1B_YR, year in which the respondent graduated from the basic nursing education program.

Years Since Graduation – Grouped (YRSNC_GP)

YRSNC_GP groups YR_SINCE into five groups, defined as follows:

- 0-5 years,
- 6-10 years,
- 11-15 years,
- 16-25 years, and
- 26 years and over.

Age at Basic Nursing Program Graduation (AGE_GRAD)

AGE_GRAD is the age of the RN at the time of graduation from the basic nursing education program. It is calculated as the difference between the year of graduation (Q1B_YR) and the year of birth (Q25).

Year of Graduation from Basic Nursing Program -- Grouped (GRAD_YR)

GRAD_YR groups Q1B_YR into eight intervals, defined as follows:

- before 1961,
- 1961 to 1965,
- 1966 to 1970,
- 1971 to 1975,
- 1976 to 1980,
- 1981 to 1985,
- 1986 to 1990, and
- since 1990.

Summary of Highest Nursing Educational Preparation (PREPSUM)

PREPSUM summarizes the RN's highest level of education into four generic groups regardless of whether the highest educational degree is nursing or nursing related. It is derived from the respondent's responses to Q1A, Q4A, and the parts of Q5. The respondent's basic nursing educational preparation is captured in Q1A. For respondents that have earned additional degrees (Q4A=1), the highest degree is captured in Q5_A1 to Q5_A10. All responses to either master's or doctorate education are regrouped in the public use files into one combined level that covers both degrees.

Highest Year of Nursing-Related Education (HYEAR)

HYEAR denotes the year when the respondent received the highest degree from nursing-related education. It is determined from responses to Q1A, Q1B_YR, Q4A, Q5_E1 to Q5_E10, and Q25. The year in which respondents received their basic nursing educational preparation is captured in Q1B_YR. For respondents that have earned additional degrees (Q4A=1), the year in which the highest degree was received is captured in Q5_E1 to Q5_E10.

Age Received Highest Nursing Related Educational Preparation (AGE_HIGH)

AGE_HIGH denotes the respondent's age at the time of receiving the highest degree from nursing-related education. It is determined from responses to Q1A, Q1B_YR, Q4A, Q5_E1 to Q5_E10, and Q25. The year in which respondents received their basic nursing educational preparation is captured in Q1B_YR. For respondents that have earned additional degrees (Q4A=1), the year in which the highest degree was received is captured in Q5_E1 to Q5_E10. AGE_HIGH was determined by using the award year of highest education among the responses to Q1B_YR and Q5_E1 to Q5_E10 (where Q4A=1 is indicated for additional educational preparation), and subtracting the response to Q25, year of birth, from this year of highest educational preparation.

Years Between Basic and Highest Nursing Related Educational Preparation (YR_BA_HI)

YR_BA_HI is the number of years between the respondent's basic nursing educational preparation and highest nursing related educational preparation. Actual years between basic and

highest education were determined by subtracting AGE_GRAD from AGE_HIGH.

Advanced Practice Nurse (APN)

APN identifies whether the RN meets a set of criteria for being prepared for any of the five types of advanced practice nurse. RNs must have indicated having advance practice training in order to be considered as having status in one of the five APN categories. These five APN categories are, as follows:

- Nurse Midwife,
- Nurse Anesthetist,
- Nurse Practitioner (NP) and Clinical Nurse Specialist (CNS) (combined category),
- Nurse Practitioner (NP), and
- Clinical Nurse Specialist (CNS).

The algorithm for APN assigns all advanced practice nurses to one of the five APN categories above. Except for the RN who may have combined Nurse Practitioner and Clinical Nurse Specialist status, RN's are assigned to have APN status in at most one advanced practice category denoted above. Some of the advanced educational and professional organization data upon which the APN variable algorithms rely is not available in the public use files but were collected as part of the Survey activities.

Nurse Midwife. In order to be identified as an APN with status as a Nurse Midwife (APN=1), the RN must have satisfied the following criteria:

- where the RN received Basic RN Education in the U.S., the RN must have also completed a subsequent educational program for advanced practice (Q6A=1), with a formal nurse midwifery educational program (Q6B_3=1) of nine months or more (Q6C_3=3), or
- where the RN completed Basic RN Education outside of the U.S. and its Possessions (Q1C > 100), the RN must have also received certification by the National Certifying Body of the American College of Nurse-Midwives (Q6G_3= 3; see Appendix I for a list of the certifying bodies) after completion of an educational program for advanced practice (Q6B_3=1) with a formal nurse midwifery educational program of nine months or more (Q6C_3=3) and a specialty studied of Nurse midwifery or Obstetrics/gynecology (Q6E_3=9,10).

Where the RN did not specify the location of the Basic Education program which was completed (Q1C=-9), the same criteria to determine APN status were applied as if the RN completed Basic Education outside of the U.S.

Nurse Anesthetist. In order to be identified as a Nurse Anesthetist (APN=2), the RN must have satisfied each of the following:

- completing a basic nursing educational program, and
- completing a subsequent educational program for advanced practice (Q6A=1) with a formal nurse anesthetist educational program (Q6B_2=1) of three months or more (Q6C_2= 2 or 3).

Nurse Practitioner and Clinical Nurse Specialist. In order to be identified as a combined NP and a CNS (APN=3), the RN must satisfy each of the following:

- completing a basic nursing educational program,
- completing a subsequent educational program for advanced practice nursing (Q6A=1) with a formal nurse practitioner educational program (Q6B_4=1) which was of three months or more duration (Q6C_4=2 or 3), and
- one of three CNS pathways:
 - completing a subsequent educational program for advanced practice (Q6A=1) with a formal clinical nurse specialist educational program at the Master's Degree level (Q6B_1=1 and Q6D_1=2),
 - completing a Master's degree in clinical practice (at least one of Q5_C5 to Q5_C9 = 1) as well as a separate CNS award from a certificate, Post-Master's Certificate, or other degree program (Q6D_1= 1,3, or 4), or
 - completing a clinical nurse specialist Post-Master's Certificate (Q6D_1=3) where the earlier Master's degree is in a primary focus category other than clinical practice (at least one of Q5_C5 to Q5_C9 >1) .

Nurse Practitioner (NP). In order to be identified as a NP (APN=4), the RN must have satisfied each of the following:

- completing a basic nursing educational program, and
- completing a subsequent educational program for advanced practice nursing (Q6A=1) with a formal nurse practitioner educational program (Q6B_4=1) which was of three months or more duration (Q6C_4=2 or 3).

Clinical Nurse Specialist (CNS). In order to be identified as a CNS (APN=5) the RN must have satisfied each of the following:

- completing a basic nursing educational program,
- completing a subsequent educational program for advanced practice (Q6A=1) with a formal clinical nurse specialist educational program (Q6B_1=1), and
- one of three acceptable CNS pathways:
 - completing a subsequent educational program for advanced practice (Q6A=1) with a formal clinical nurse specialist educational program at the Master's Degree level (Q6B_1=1 and Q6D_1=2),
 - completing a Master's degree in clinical practice (at least one of Q5_C5 to Q5_C9 = 1) as well as a separate CNS award from a certificate, Post-Master's Certificate, or other degree program (Q6D_1= 1,3, or 4), or
 - completing a clinical nurse specialist Post-Master's Certificate (Q6D_1=3) where the earlier Master's degree is in a category other than in clinical practice (at least one of Q5_C5 to Q5_C9 >1).

Not within criteria. APN status is coded as not being within criteria (APN=8) in certain situations, as follows:

- respondents who did not indicate having completed an educational program for advanced practice (Q6A is other than 1),
- respondents whose educational program for advanced practice was completed in a foreign country (with the exception of Nurse Midwifery), or
- respondents who completed an educational program for advanced practice (Q6B_1 to

Q6B_4 equals 1), but where the additional educational specifications provided in the survey responses do not confirm such educational program completion.

(Advanced Practice Nurse Status being State-Recognized (STATEAPN))

This variable was not recoded for 2000 as it was in 1996, but is on the database. STATEAPN was used in 1996 to denote whether or not the nurse has APN credentials recognized by a State Board of Nursing. This information was not coded as a separate field in 2000. However, the information is incorporated into position #7 of the digits of variable ID (RTI ID Number with Digit Check) and was utilized in the analysis leading to the Findings Report published by the Bureau.

State of Graduation versus Place of Employment/Residence (GD_GEOST)

GD_GEOST compares the state in which the RN initially received basic RN education (Q1C) to the State in which the RN is located on 3/22/2000 as denoted in G_ST00. Where the states are the same, a value of 1 is coded. Where the States are different (though both Q1C and G_ST00 have values between 1 and 56), a value of 2 is coded. Where the RN originally received basic RN education outside the U.S. (where Q1C is of a value greater than 56) or is currently living outside the U.S. (where G_ST00 is 0), a value of 3 is coded.

Graduated from a U.S. or Foreign Basic Nursing Program (GRAD_WHR)

GRAD_WHR indicates whether the location of the basic education program that the nurse graduated from was a U.S. school or in a location outside of the U.S. It is tabulated from responses to Q1C.

Region Received Basic Nursing Education (REG_B_ED)

REG_B_ED is the geocode for the Census Division (Region) where the respondent received basic nursing education. It is tabulated from responses to Q1C. The list of nine established Region codes is shown in Appendix F. Where the location is outside of the United States (Q1C>56), REG_B_ED is coded as a 10. Education received in U.S. Territories/Possessions is considered to be outside of the U.S.

1.5.2 Employment Status Constructed Variables

These variables are constructed from responses to the employment section of the questionnaire. These variables summarize information about:

- employment status,
- employment setting,
- scheduled hours per year,
- position and dominant function,
- geographic region and state of employment, and
- changes in employment between 1999 and 2000.

Detailed Employment Status (EMP_STAT)

EMP_STAT summarizes the nurse's current employment status on 3/22/2000, using responses to Q8, Q15 and Q21 to generate seven categories. These categories are as follows:

- full time in nursing,
- part time in nursing,
- full time not in nursing,
- part time not in nursing,
- unknown status for those employed in nursing,
- unknown status for those not employed in nursing, and
- those not employed at all.

For those employed in nursing, this variable combines Q8 (current employment status in nursing) and Q15 (full-time/part-time employment status). For those not employed in nursing or not employed at all, this variable combines Q8, Q21A (employment in another occupation) and Q21B (full-time/part-time employment status in another occupation).

Employment Status in 2000 (EMPL_00)

EMPL_00 indicates the RN employment status in nursing as of 03/22/2000. It is a combination of responses to Q8 (current employment status in nursing) and Q15 (full-time/part-time employment status). Those not employed in nursing are coded as EMPL_00=4.

Employment Status in 1999 (EMPL_99)

EMPL_99 indicates the RN employment status in nursing as of 03/22/1999. It is a combination of responses to Q23A (employment status in nursing one year ago) and Q23B (full-time/part-time employment status a year ago). Those not employed in nursing are coded as EMPL_99=4.

Employment Status in 2000 in Comparison to 1999 (EMP00_99)

EMP00_99 compares the respondent's employment status in nursing on 03/22/2000 (EMPL_00) to the employment status in nursing on 03/22/1999 (EMPL_99). It reflects changes in full time and part time status as well as any overall changes with the employment in nursing. Nine categories are defined as follows:

- full time employment in nursing in both years,
- full time employment in nursing in 2000 and part time employment in nursing in 1999,
- full time employment in nursing in 2000 and not employed in nursing in 1999,
- part time employment in nursing in 2000 and full time employment in nursing in 1999,
- part time employment in nursing in both 1999 and 2000,
- part time employment in nursing in 2000 and not employed in nursing in 1999,
- not employed in nursing in 2000 and full time employment in nursing in 1999,
- not employed in nursing in 2000 but part time employment in nursing in 1999, and
- not employed in nursing in both 1999 and 2000.

Employment through Temporary Employment Service (EMPL_TES)

EMPL_TES captures whether a respondent employed in nursing (Q8=1) is employed by a temporary employment service in their principal or secondary nursing position. Each employed respondent is asked about their principal nursing position in Q10 and secondary nursing position in Q19. The recoded variable separately categorizes the primary and secondary employment of the RN into four circumstances, as follows:

- having temporary employment service as only their primary employment in nursing,
- having temporary employment service as only their secondary employment in nursing,
- having temporary employment services for both primary and secondary employment in nursing, and
- not having any nursing employment through a temporary employment service.

2000 Employment Setting Summary (SETSUM00)

Q11 identifies the principal health care setting for their primary nursing position of RN's employed in nursing as of March 22, 2000. SETSUM00 collapses the 71 detailed categories of Q11 into 10 categories. For each respective SETSUM00 category, the original Q11 values aggregated for that value of SETSUM00 are also shown below:

- hospital = 110 to 180,
- nursing home/extended care = 210 to 250,
- nursing education = 310 to 360,
- public health or community health = 400 to 475,
- student health = 510 to 540,
- occupational health = 610 to 630,
- ambulatory care owned or not owned by RN = 710 to 805,
- insurance claims/benefits = 810 to 840,
- planning/licensing agency = 910 to 945, and
- other miscellaneous setting = 950 or higher.

1999 Employment Setting Summary (SETSUM99)

Q23D identifies the principal health care setting for the primary nursing position of RN's employed in nursing one year prior to the survey year (on March 22, 1999). SETSUM99 collapses the 71 detailed categories in Q23D into 10 categories. For each respective SETSUM99 category, the original Q23D values aggregated for that value of SETSUM99 are also shown below:

- hospital = 110 to 180,
- nursing home/extended care = 210 to 250,
- nursing education = 310 to 360,
- public health or community health = 400 to 475,
- student health = 510 to 540,
- occupational health = 610 to 630,
- ambulatory care owned or not owned by RN = 710 to 805,

- insurance claims/benefits = 810 to 840,
- planning/licensing agency = 910 to 945, and
- other miscellaneous setting = 950 or higher.

Employment Setting 1999 versus 2000 (SET99_00)

SET99_00 summarizes changes in employment setting between 1999 and 2000. SET99_00 indicates whether the RN is employed in the same setting (Q23D=Q11) or in a different setting (Q23D does not equal Q11).

Scheduled Hours per Year (HRS_YR)

HRS_YR is derived from the combination of responses to Q16A and Q17. The recoded variable value is the product of Q16A (the number of hours worked in the principal job during a normal workweek, including overtime) and Q17 (the number of weeks in the respondents normal work year).

Edited Weeks Worked per Year (EWKS_YR)

EWKS_YR is an edited version of the response to Q17 regarding the weeks worked in a year. It assigns the value of 52 to all respondents who reported working more than 52 weeks in a year.

Position Title – Grouped (POSITION)

All respondents who indicated that they were employed in nursing were asked in Q12 to select the position title that was most-closely related to the position title for their principal nursing position. POSITION collapses the 36 response categories in Q12 into 16 categories. For each respective POSITION category, the original Q12 values aggregated for that value of POSITION are shown below:

- administrator or assistant administrator = 1, 2, or 8,
- consultant = 7,
- supervisor = 31,
- instructor = 13, 14, 15, and 25,
- head of nursing or assistant head of nursing = 10 and 19,
- staff or general duty nurse = 5, 26, 29, 30, 32, and 33,
- nurse practitioner or nurse midwife = 20 and 21,
- clinical nurse specialist = 6,
- nurse clinician = 17,
- certified nurse anesthetist = 4,
- researcher = 28,
- private duty nurse = 24,
- informatic nurse = 12,
- other = 3, 9, 11, 16, 18, 22, 23, 27, and 34,
- home health = 35,
- surveys/auditors/regulator = 36.

Weeks That RN is Seeking a Nursing Position (SEEKTIME)

SEEKTIME is based on the responses of RN's who were not working in nursing and were seeking a position in nursing. SEEKTIME summarizes responses to Q22B (how many weeks they have been seeking nursing employment) into 10 time periods as follows:

- <1 week,
- 1 week,
- 2 weeks,
- 3 weeks,
- 4 weeks,
- 5-9 weeks,
- 10-14 weeks,
- 15-34 weeks,
- 35-52 weeks, and
- >= 53 weeks.

Region of Employment (REG_EMPL)

REG_EMPL is the geocode for the Census Division (Region) for the respondent's principal nursing position as of 3/22/2000. It is tabulated from the responses to Q9_ST. The list of nine established Region codes is shown in Appendix F. Where the location is outside of the United States (Q9_ST>56), REG_EMPL is coded as 10. Residence and employment in U.S. Territories/Possessions is considered to be outside of the U.S.

Dominant Function in Principal Nursing Position (DOMFUNCT)

DOMFUNCT uses responses to Q13 to identify the function which occupies more than 50% of time in the RN's principal nursing position during a usual work week. If no function covers more than 50% of time, DOMFUNCT is coded as '8', for 'No Dominant Function'.

- Administration
- Consultation with agency
- Direct patient care
- Research
- Supervision
- Teaching in nursing/health care occupation
- Other

Years Since Last Worked for Pay as an RN (LST_WRKD)

RN's who report not being employed in nursing at the time of the survey were asked to report the number of years since they have worked for pay as an RN (Q20_YR). The variable LST_WRKD groups the response to Q20 into seven categories, as follows:

- <1 year,
- 1-2 years,

- 3-4 years,
- 5-9 years,
- 10-19 years,
- ≥ 20 years, and
- never worked as a nurse.

State RN Obtained First License versus Place of Employment/Residence for 2000 (LI_RESST)

LI_RESST indicates if the RN is employed in the State in which they obtained their first license to practice (i.e., where $G_ST00 = Q32B_ST$). Q32B_ST is the State in which the respondent was first licensed; G_ST00 is the state of employment in nursing as of March 22, 2000 if the registered nurse is employed in nursing (Q8=1), or the State of residence if the nurse reports not being employed in nursing (Q8=0).

1.5.3 Demographic Information

The demographic constructed variables include age, race/ethnicity, marital status, and geographic state and region of employment and/or residence (for 2000 and 1999). Age is computed using year of birth. Marital status and children are constructed variables that combine responses to two questions: marital status and the number of children.

Age of Nurse in 2000 (AGE)

AGE was determined by subtracting the year of birth (Q25) from the year of the survey minus one.

Age of Nurses – Grouped (AGE_GP)

AGE_GP is a derived variable that aggregates AGE into 10 categories defined, as follows:

- <25 years,
- 25-29 years,
- 30-34 years,
- 35-39 years,
- 40-44 years,
- 45-49 years,
- 50-54 years,
- 55-59 years,
- 60-64 years, and
- ≥ 65 years.

Marital Status and Children (MAR_CHLD)

MAR_CHLD combines information from Q27 on marital status with Q28 on whether children are at home.

These 11 categories of MAR_CHLD are as follows:

- married with children under 6,
- married with children over 6,
- married with children both under and over 6,
- married with no children at home,
- married but the number of children at home is unknown,
- widowed/separated/divorced with children under 6,
- widowed/separated/divorced with children over 6,
- widowed/separated/divorced with children both under and over 6,
- widowed/separated/divorced with no children at home,
- widowed/separated/divorced but the number of children at home is unknown, and
- never married.

The never married category covers all RN's who were never married, regardless of the presence of children at home.

Race/Ethnic Background (RACE_GP)

RACE_GP summarizes racial/ethnic background (Q26A and Q26B_1 to Q26B_5) into two groups,

- white, non-hispanic, and
- other.

Geocode for State on 3/22/2000 (G_ST00)

G_ST00 is the numeric FIPS state code that identifies, as follows below, the State where the RN is employed in nursing, or the place of residence if the RN is not employed in nursing, on 3/22/2000:

- when employed in nursing (Q8=1) on 3/22/2000 = the State of employment of the principal nursing position (Q9_ST), or
- when not employed in nursing (Q8=0) on 3/22/2000 = the State of residence (Q30_ST) where the RN was living on 3/22/2000.

The list of States and their respective FIPS codes are shown in Appendix D. When the location is outside of the U.S., G_ST00 is 0. Residence and employment in U.S. Territories or Possessions is considered to be outside of the U.S.

Geocode for State on 3/22/1999 (G_ST99)

G_ST99 is the numeric FIPS state code that identifies, as follows below, the State where the RN was employed in nursing, or otherwise lived, on 3/22/1999:

- when actively employed in nursing (Q23A=1) on 3/22/1999 = the State where the RN was employed in their principal nursing position (Q23C_ST), or
- when not employed in nursing on 3/22/1999 or the nursing employment status is unknown, (Q23A=0 or -9) = the State of residence (Q31B_ST) where the RN was living.

The list of States and their respective FIPS codes are shown in Appendix D. When the location was outside of the U.S., the convention is to code G_ST99 is 0. Residence and employment in U.S. Territories/Possessions is considered to be outside of the U.S.

Geocode for Census Division (Region) on 3/22/2000 (G_RG00)

G_RG00 is the geocode for the Census Division (region) where the RN primarily worked or lived on 3/22/2000. The list of nine established Region codes is shown in Appendix F. G_RG00 is based on the State geocode, G_ST00.

- when employed in nursing (Q8=1) on 3/22/2000 = the Census Division where the RN was employed in the principal nursing position, or
- when not employed in nursing (Q8=0) on 3/22/2000 = the Census Division of residence.

When the location is outside of the U.S. (G_ST00=0), G_RG00 is coded as 10. Residence and employment in U.S. Territories/Possessions is considered to be outside of the U.S.

Geocode for Census Division (Region) on 3/22/1999 (G_RG99)

G_RG99 is the geocode for the Census Division (region) where the RN primarily worked or lived on 3/22/1999. The list of nine established Region codes is shown in Appendix F. G_RG99 is based on the State geocode, G_ST99.

- when employed in nursing (Q23A=1) on 3/22/1999 = the Census Division where the RN was employed in the principal nursing position, or
- when not employed in nursing (Q23A=0) on 3/22/1999 = the Census Division of residence.

When the location was out of the U.S. (G_ST99=0), G_RG99 is coded as a 10. Residence and employment in U.S. Territories/Possessions is considered to be outside of the U.S.

Metropolitan Statistical Area (MSA) Geocode Status for 2000 (G_MSA_00)

G_MSA_00 is the summary descriptor of the RN's metropolitan area status on 3/22/2000, as follows:

- when not located in an MSA on 3/22/2000 = 1,
- when the address on 3/22/2000 is located in an MSA, with GMSA_00 valued between 1 and 9996 = 2, or
- when outside of the U.S. on 3/22/2000 = 3.

See the County Public Use File documentation and Appendix G for the full detailed list of MSA codes which are to be used in conjunction with variable G_MSA00 of the County Public Use File.

State of Residence the same in 1999 and 2000 (RST_SME)

RST_SME summarizes the comparison between the responses to the RN's State of residence on March 22, 2000 (Q30_ST), and the RN's State of residence on March 22, 1999 (Q31B_ST), as follows:

- the RN resides in the same State = 1,
- the RN resides in a different State = 2, or
- the RN lived outside the US in either 1999 or 2000 = 3.

County of Residence the same in 1999 and 2000 (RCTY_SME)

RCTY_SME summarizes the comparison between the responses to the RN's County of residence on March 22, 2000 (Q30_CO), and the RN's State of residence on March 22, 1999 (Q31B_CO), as follows:

- the RN resides in the same county = 1,
- the RN resides in a different county = 2, or
- the RN lived outside the US in either 1999 or 2000 = 3.

Region of Residence 2000 (REG_RESI)

REG_RESI is the geocode for the RN's Region of residence as of 3/22/2000. It is tabulated from the Survey responses to Q30_ST (place of residence). The list of nine established Census Division, Region codes is shown in Appendix F. When the location is outside of the United States (Q30_ST=0), REG_RESI is coded as 10. Residence in U.S. Territories/Possessions is considered to be outside of the U.S.

1.5.4 Survey Administration

The survey administration variable information contains information related to the sample selection and the mode of data collection.

RN Working/ Living in US on 3/22/2000 (RN_POP)

RN_POP summarizes whether the RN was working or living in the United States at the time of the survey on 3/22/2000. The RN_POP categories are as follows:

- working or living outside the United States on 3/22/2000 = 1. (See G_ST00 for discussion of how working or living outside the United States is derived). Residence and employment in U.S. Territories/Possessions is considered to be outside of the U.S.,
- working or living within the United States = 2, or
- not being alive at the time of the survey (DEATH=1) or no being longer eligible as a licensed RN at the time of the survey date of 3/22/2000 (ELIGFLAG=0) = 3.

1.5.5 Sample Weights and Variance Estimation

The use of sample weights permits the derivation of national and State level estimates of the registered nurse population and subgroups of this population based on sample data. A single full sample weight (WEIGHT) for each RN is provided for the public use file. In addition, 20 replicate weights are provided for variance estimation.

Basic Weight for the Whole Sample (WEIGHT)

An RN level full sample weight (WEIGHT) was created for responding RNs who are eligible to be included in the sample. A weight was assigned to each eligible registered nurse, who held an

active license. This weight reflects the original probability of selection of the RN, ratio adjusted for non-participation (nonresponse), multiple license assignment, and age. Overall, the registered nurse population living or working in the U.S. in 2000 was 2,696,540.

Variance Estimation

To obtain estimates of variability such as standard errors or corresponding confidence intervals, for estimates based on the NSSRN data, one needs to take into account the complex survey design of the NSSRN. Various approaches could be used to generate such estimates including the Taylor series approximation, the balanced repeated replications or the jackknife. For the NSSRN, it was determined that jackknife replication is the best method for estimating the variability.

Weight for Replicate Samples (WEIGHT01 – WEIGHT20)

When data are collected as part of a complex survey, there is often no easy way to produce approximate unbiased design consistent estimates of variance analytically. The variance of survey statistics from SAS and SPSS are inappropriate and generally too small. A technique called jackknife replication method is used for estimating variances from the NSSRN.

The basic idea is to select subsamples repeatedly from the whole sample, calculate the sampling weights for each of these subsamples (WEIGHT01 – WEIGHT20), calculate the statistic of interest for each of the subsamples, and then use the variability among these subsamples (replicates) to estimate the variance for the full sample.

Description of How to Calculate Variances

The National Survey of Registered Nurses uses a jackknife replication method for variance estimation. The specific design for this study has 20 replicates (from 20 pairs of alpha-segments (PSU's)) and thus 20 degrees of freedom. In the jackknife replication method, multiple replicates are constructed from a subset of the data, and the variance of the estimate is calculated as the variance across all the replicates. In the case of the NSSRN, 20 replicates are created by pairing the 40 PSU's into 20 pairs, and dropping one PSU from each pair systematically. A few computer programs will correctly estimate variances with this design, including SUDAAN (version 8) and WesVar. SUDAAN calculates the variances in a manner nearly identical to the SAS macro used in the creation of the tables in Appendix B of the *The Registered Nurse Population, Findings from the NSSRN, March 2000*. However, SUDAAN provides for an adjustment factor that corrects for the additional variation caused by the replicate weights that is not present in the full sample. This adjustment, equal to the number of PSU's in each replicate divided by the total number of replicates ($39/40 = 0.975$) reduces the variance estimates by about 1.25%, and is specified on the ADJJACK option of the JACKWGTS statement.

SUDAAN Version 8 Example for 2000 National Survey of Registered Nurses

Below we provide an example using SAS Callable SUDAAN Version 8. Users of standalone SUDAAN will need to modify certain pieces of the code as appropriate:

```

proc crosstab DATA=work.RN00DATA FILETYPE=SAS DESIGN=JACKKNIFE;
  WEIGHT      weight;
  jackwgt    weight01-weight20 /adjjack=0.975;
  rtitle      "2000 National Nursing Survey";
  rtitle      "Table B-2, Jackknife Replicate Estimates";
  rtitle      "Using (40-1) / 40 = 0.975 as the ADJJACK Factor";
  subpopn     rn_pop = 2;
  subgroup    PREPSUM
  levels      6;
  rformat      prepsum prepsum.;
  print       nsum wsum sewgt rowper serow
              / nsumfmt=f6.0 wsumfmt=f9.0 sewgtfmt=f9.0
              rowperfmt=f8.2 serowfmt=f9.5;

run;

```

Users are cautioned that the data as provided on the Public Use File may not be in suitable categories with regard to SUDAAN. In particular, for categorical variables, negative and zero values are not allowed, and the categories must go from 1 to k, with k being the number of levels. See the SUDAAN Version 8 User's Manual for more details.

Results for this example are as follows:

Variance Estimation Method: Replicate Weight Jackknife
 For Subpopulation: RN_POP = 2
 2000 National Nursing Survey, Table B-2, Jackknife Replicate Estimates
 Using (40-1) / 40 = 0.975 as the ADJJACK Factor
 by: HIGHEST NURSING EDUCATIONAL PREP--SUM.

As mentioned above, SUDAAN with the ADJJACK is more efficient (lower variance) than the SAS macro used to prepare the report *The Registered Nurse Population, Findings from the NSSRN, March 2000*. A comparison using the estimates from tables B-2 and B-3 of this report indicates an improvement of about 1.25% in the variances (standard errors). Tables 1 and 2 below show the direct comparison. Please note that a few discrepancies in numbers exist between the numbers in tables B-2 of the Findings report and the numbers in Table 1 below. This is due to data cleaning and editing that occurred after the Findings report was published, but before the public use files were released.

2. Survey Sample Information

2.1 Sample Design and Response Rates

The respondent universe for the National Sample Survey of Registered Nurses 2000 (NSSRN) includes all RNs holding at least one current active license from one of the 50 States or the District of Columbia at the time of sample selection. For each State, a file or files containing a complete list of all currently licensed RNs was used as the source of the sample (the sampling frame). This survey's design follows that of the previous six surveys. The State agencies responsible for licensing are very familiar with the process and securing cooperation was a straightforward procedure.

Each State's current RN licenses were considered a stratum for sample selection. Different sampling rates were set for each State based on considerations of the statistical precision of the estimates and the costs involved. There were about 3.07 million licenses issued to RNs at that time and about 54,000 selected to be part of the 2000 sample. The 2000 survey estimated that there were about 3.05 million individuals with licenses in the United States who were employed in nursing. Since nurses may hold licenses in more than one State, the 54,000 included in the actual sample selection represent licenses rather than individual RNs.

In addition to obtaining state and national estimates of the RN population, the NSSRN 2000 required an oversampling of minority nurses. The objective was to increase the sample size of minorities in order to enhance the ability of researchers to focus on the education and the labor characteristics of the minority population. The overall sample size was increased by 9,000 (to an initial sample size of 54,000 from the 45,000 used for previous RN surveys) in order to include more minorities in the sample.

The NSSRN is designed to produce estimates at the national and state level for the active licensed registered nurse as of March 22, 2000. It is a cross-sectional survey conducted once every four years. For details about the sample design, see Appendix B of this User's Guide. The response rate for the 2000 NSSRN was 71.7 percent.

D. Codebook

National Sample Survey of Registered Nurses 2000
General Public Use File
Introduction

This codebook describes the National Sample Survey of Registered Nurses general public use file for 2000, RN00Publ.TXT. The file, which is distributed in ASCII format, contains 212 variables and 35,579 nurse-level records. The unique record identifier and sort key is the variable ID. In addition to this introduction, the codebook consists of three parts, an alphabetical listing of the variables, a positional listing of the variables, and the main portion of the codebook containing unweighted and weighted counts, and descriptive information on a variable-by-variable basis.

Codebook Order

The variables included on the file are ordered based on the questions appearing in the survey instrument, with some non-questionnaire related variables appearing at the end. The variables appear in the codebook in the following order:

Section A: Education
Section B: Employment status
Section C: Employment status of RNs not employed in nursing
Section D: Prior nursing employment status
Section E: General information

The set of derived variables include information about the following:

Education Constructed Variables
Employment Status Constructed Variables
Demographic Information
Survey Administration
Sample Weights and Variance Estimation

Variable Listings

The codebook contains lists of the variables on the file in alphabetical and positional order. Each list includes the start and end column position, variable name, and a brief description or label for the variable. This description is limited to 40 characters. The same 40 character descriptions are also provided in the LABEL statement section of the SAS user file provided with the public use file.

Main Codebook

The main portion of the codebook follows the alphabetical and positional listings. Unweighted and weighted counts for each variable are displayed. The counts and percentages for each variable are arranged such that missing data (e.g. -9: Unknown/Refused, -8: Inapplicable) appears first, followed by valid data. If a variable is a continuous or semi continuous variable (like a year or a percentage), then the values are detailed as a range of values (for example, for the variable Q18, 1-\$550,000 means that the actual data values are between 1 and 550,000). In addition, a number of informational fields about each variable are included to assist the user in working with the data. These include:

Name	Variable name (maximum of 8 characters)
Description	Variable descriptor (maximum 40 characters)
Format	Number of bytes
Type	Type of data: numeric (indicated by NUM) or character (indicated by CHAR)
Start record	Beginning column position of variable in
End record	Ending column position of variable in
Reference	Reference Appendix or page of the User's Guide where there is more information about the variable

Additional information on variable construction and editing, as well as specific information on selected variables is included in Section C of the User Guide.
